Orthopedics & Joint Replacement

Orthopedics & Joint Replacement

At Avantis Hospital, the Orthopedics & Joint Replacement Department really covers the full spectrum when it comes to bone, joint, ligament, and muscle care. If you're dealing with knee or hip pain, stiffness, injuries, or just struggling to move the way you used to, our team figures out exactly what's going on and tailors a treatment plan that fits you.

Get you out of pain, help you move better, and make a difference with both non-surgical and surgical management. Early detection of joint issues often means avoiding larger problems and, in some cases, avoiding surgery altogether. But when you really need advanced treatment, they're ready with the latest techniques and solid rehab programs to make sure you recover safely and keep your joints healthy for the long haul.

Key Services & Specialties

Arthritis and persistent joint pain
Knee and hip treatment
Athletic injuries
Tears in ligaments (such as the ACL or PCL)
Meniscus issues
Instability and shoulder injuries
Trauma and fractured bones
Entire hip and knee replacements
Arthroscopy, or keyhole surgery
Ligament reattachment
Physiotherapy recommendations and non-surgical treatments

Advanced Orthopedic Care

Joint Replacement Care
Treatments to reduce pain and enable you to resume your daily activities in cases of severe arthritis and severe joint damage.

Arthroscopy & Sports Injury Treatment
Minimally invasive options to repair ligament tears, cartilage damage, and shoulder issues usually come with less pain and a faster bounce-back.

Trauma & Fracture Care
We repair all fractures, no matter how minor or complex, with the goal of promoting healing and restoring your strength.

Rehabilitation & Recovery Support

individualized strength-training and physical therapy regimens to help you regain your confidence, flexibility, and balance following treatment.

When Should You See an Orthopedic Specialist?

Don't wait if you have:
- Persistent knee or hip pain
- Pain climbing stairs or standing up
- Stiff joints in the morning
- Swelling around a joint
- Trouble walking or a limp
- Shoulder pain when you lift your arm
- An injury from a fall or sports
- Less movement in a joint

Getting checked out early stops problems from getting worse and helps you recover quicker.

Managing Director & Consultant Orthopaedic Surgeon
MBBS (BMCRI, Bangalore)
MS Orthopaedics (Grant Govt. Medical College, Mumbai)
DNB Orthopaedics

FAQ

1. When do you actually need knee replacement surgery?
Doctors usually suggest knee replacement when arthritis gets so bad that pain won't go away, even with medication and physiotherapy. If walking gets tough and your daily life feels limited, that's when surgery comes into the picture.

2. How long does it take to recover after joint replacement?
Most people start walking again just a few days after surgery. Getting strength back with exercises usually takes somewhere between 6 and 12 weeks.

3. Can you treat joint pain without surgery?
Absolutely. A lot of people feel better with medication, physiotherapy, losing some weight, or getting joint injections. It depends on how bad things are, but surgery isn't the only option.

4. What are the early signs of arthritis?
You might notice your joints feel stiff or swollen. Moving around hurts, and climbing stairs can turn into a real struggle.

5. What is arthroscopy?
Arthroscopy is a “keyhole” surgery—doctors use tiny tools and a camera to check out and fix problems with the ligaments or cartilage inside your joint. It’s much less invasive than open surgery.

6. How do I know if I’ve torn a ligament?
If you’ve hurt your knee and now it’s swollen, feels wobbly, or you heard a pop when it happened, that’s a sign. It’s also tough to put weight on it.

7. How long do knee implants last?
These days, most knee implants last 15 to 20 years, sometimes longer. It depends on how active you are and your overall health.

Endocrinology & Diabetes Care

Endocrinology & Diabetes Care

At Avantis Hospital, the Endocrinology & Diabetes Department takes care of hormone-related problems in both adults and kids. Hormones in the body regulate essential functions such as metabolism, growth, thyroid balance, blood sugar levels, and reproductive health. When there are any imbalances in these, it will impact the overall wellness.

We focus on early diagnosis, evidence-based treatment, and long-term disease management for diabetes, thyroid disorders, growth concerns, and other endocrine conditions.

Key Services & Specialties

- Diabetes (Type 1, Type 2, and gestational diabetes)
- Thyroid issues (thyroid nodules and hypo/hyperthyroidism)
- Hormone issues in children
- Hormone imbalance
- PCOS and other menstrual problems
- Obesity & metabolic syndrome
- Growth Disorder and Puberty
- Pituitary and adrenal gland issues
- Calcium metabolism and osteoporosis
- Insulin therapy and advanced diabetes care

Advanced Endocrine Care

Diabetes Care
We help you keep blood sugar in check—offering personalized monitoring, insulin plans, lifestyle tips, and ways to prevent long-term problems.

Thyroid & Hormone Health
We get to the root of thyroid issues and other hormone imbalances using accurate lab tests and proven treatments.

Pediatric Endocrinology
Children with juvenile diabetes, early or late puberty, or growth delays receive specialized care aimed at promoting healthy development.

Ongoing Support & Prevention
Regular examinations keep an eye on your heart, kidneys, nerves, and bones to keep minor problems from becoming serious ones.

When Should You See an Endocrinologist?

If you observe any of these symptoms, don't ignore them and make an appointment.

Constant fatigue or unexpected weight fluctuations
Frequent urination or constant thirst
Irregular periods
Loss of hair or abrupt changes in skin
Children are not developing normally
Unexpected weight gain or difficulties losing weight
Thyroid or neck swelling
Difficulty maintaining stable blood sugar levels

Catching problems early makes a huge difference. The sooner you get checked, the better your odds of avoiding lifelong complications.

Book My Appointment

Make an appointment at Avantis Hospital if you want to control your diabetes and hormones or if you need professional advice.

Dr. Divya C. Ragate
Medical Director & Consultant Endocrinologist, Diabetologist & Hormone Specialist (Adult & Pediatric)
MBBS – BMCRI, Bengaluru
MD (Internal Medicine) – PGIMER, Chandigarh
DM (Endocrinology) – KEM Hospital, Mumbai
Gold Medalist
Consultant Endocrinologist – Aster CMI Hospital, Bengaluru
KMC Registration No: 119858

Getting the right help at the right time brings your hormones back in line, helps you manage diabetes, and stops bigger health problems before they start.

FAQs

1. When should I see an endocrinologist for diabetes?
It's time to see a specialist if your blood sugar doesn't go down despite taking medication, or if you begin to experience numbness, changes in your vision, or kidney problems.

2. What are early signs of thyroid trouble?
Monitor for changes in weight, fatigue, hair loss, mood swings, irregular menstruation, or neck swelling.

3. Can hormonal imbalance make me gain weight?
Absolutely. Issues with the thyroid, insulin resistance, PCOS, or adrenal glands often show up as unexplained weight gain.

4. Do kids with slow growth need an endocrinologist?

Yes, they should get checked if they're growing slower than expected, or if puberty is way ahead or behind the usual timeline.

5. Is diabetes reversible?
Type 2 diabetes often gets much better with lifestyle changes and medical care, but it still needs long-term attention.

6. What is gestational diabetes?
Gestational diabetes starts during pregnancy. It's important to monitor blood sugar closely to keep both mom and baby healthy.

7. How often do I need my thyroid checked?
It depends, but most people need to get their levels checked every 3–6 months while adjusting treatment.

Neurosurgery & Spine Care

Neurosurgery & Spine Care

Overview

At Avantis Hospital, the Neurosurgery & Spine Department handles everything from tough back pain and nerve issues to head injuries and other neurological problems. When you're dealing with a slipped disc, nerve compression, or sudden numbness, getting the right diagnosis and treatment fast really matters. It can make a huge difference in cutting down pain, stopping nerve damage, and helping you get back on your feet sooner.

Here, you're not just a case file. The team digs deep with clinical exams and advanced imaging, then tailors a treatment plan just for you. They always start with the least invasive options like medication, therapy, and lifestyle tweaks. If surgery is the best call, they use the latest techniques to take pressure off nerves, restore function, and lift your quality of life.

Key Services & Specialties

- Slip disc (disc prolapse) care
- Treatment for sciatica and nerve compression
- Solutions for chronic neck and back pain
- Help with spine injuries and fractures
- Management of brain and spinal tumors
- Head injury care
- Treatment for nerve weakness and numbness
- Spinal canal stenosis solutions
- Minimally invasive spine procedures
- Care for degenerative spine disorders
- Cervical and lumbar spine condition management
- Advanced Neuro Care

Advanced Neuro Care

Spine Disorder Management
They evaluate and treat chronic back pain, disc issues, and nerve compression to ease pain and help you move better.

Minimally Invasive Spine Procedures
These use smaller cuts and precise techniques, which means less damage to your tissues and a quicker recovery.

Head Injury & Emergency Neurosurgery
If you have a serious brain injury or sudden neurological emergency, you'll get rapid, expert care.

Post-Treatment Rehabilitation

Recovery programs focus on building strength, improving balance, and helping you ease back into everyday life.

When Should You See A Neurospecialist?

If you notice the following, seek medical attention:

- Chronic back or neck pain
- Pain that runs down your arm or leg.
- Numbness or tingling in the hands or feet
- Weakness in the arms or legs
- Having trouble walking or staying balanced
- Severe headaches.
- Any harm following a fall or mishap
- Abdominal or bladder control loss

Over time, early specialist consultation helps protect your nerves.

Book My Appointment

You can book a neurological or spine evaluation at Avantis Hospital with Dr. Rakshith Srinivas, Consultant Neurosurgeon & Spine Specialist. Fast diagnosis and treatment go a long way—easing pain, restoring nerve function, and letting you get back to what you love.

FAQ

1. What's a slipped disc?
A slipped disc happens when the soft disc between your spine's bones bulges or tears. It can push on nearby nerves, causing pain, numbness, or weakness.

2. Can you treat back pain without surgery?
Absolutely. Many spine problems get better with medication, physiotherapy, better posture, and changes in your daily routine.

3. When do you need spine surgery?
Surgery comes into play when nerve compression leads to ongoing pain, weakness, or loss of function that doesn't get better with other treatments.

4. What are signs of nerve compression?
Look for pain that radiates, tingling, numbness, muscle weakness, or trouble walking.

5. How long does it take to recover after spine surgery?
It's different for everyone, but many people get back to their regular activities within a few weeks, especially with good rehab.

6. Is minimally invasive spine surgery safe?
Yes. It uses smaller incisions, does less damage to your muscles, and usually helps you recover faster.

7. When should you worry about a headache?
Get medical help if your headache is severe, sticks around, comes with vomiting, vision problems, or weakness.

Cardiology & Heart Care

Cardiology & Heart Care

Overview

The Cardiology Department at Avantis Hospital handles all matters pertaining to your heart and blood vessels. Often, heart disease develops slowly; at first, you may not notice any symptoms. Early screening and examination are therefore crucial.

Understanding your risks, identifying issues early, and adjusting care to meet your needs are the main goals of our team. A comprehensive assessment and a customized plan will be provided, regardless of whether you are experiencing palpitations, chest pain, shortness of breath, or high blood pressure, or if you are already aware that you have heart problems.

Most heart issues can be managed, and major complications can be avoided with the correct medical care, lifestyle guidance, and routine checkups.

Key Services & Specialties

- Check for the cause of chest pain.
- Control elevated blood pressure
- Handle coronary heart disease
- Assist in the treatment of heart failure
- Resolve rhythm problems and palpitations.
- Take care of lipid issues, including cholesterol.
- Care for you after a heart attack
- Determine your heart risk.
- Provide dietary and lifestyle guidance.

Advanced Cardiac Care

Assessing Heart Health
We monitor your blood pressure, cholesterol, and family history to identify problems early.

Administration of Healthcare
You are given a treatment plan that includes heart-healthy lifestyle changes, medication, and follow-up.

Emergency Heart Care
If you arrive with severe chest pain or abrupt dyspnea, we will promptly check and stabilize you.

Extended monitoring
We constantly check your heart to ensure your health and minimize setbacks.

When Should You Consult a Heart Expert?

Don't disregard these indications. Get checked if you have:

- tightness or discomfort in the chest
- Inability to breathe, even when just walking around
- Your heart palpitating or skipping beats
- Fainting or feeling dizzy
- Your legs or feet might be swollen.
- Unmanageable blood pressure
- Very tired and not doing much
- Family history of heart disease

The risk of heart attack and stroke is considerably decreased by early detection of cardiac problems.

Book My Appointment

You can book a heart check-up or screening at Avantis Hospital. Early consultation with a specialist and regular follow-up are the best ways to maintain your health and avoid serious heart problems.

FAQs

1. What are the early signs of heart disease?
Watch out for chest discomfort, getting out of breath easily, unexplained fatigue, palpitations, or not being able to exercise like you used to.

2. Is high blood pressure really that bad?
Yes. High blood pressure can harm your heart, kidneys, brain, and blood vessels if you don't manage it.

3. How often should I get my heart checked?
If you're over 30 or have risks like diabetes, obesity, or you smoke, regular screening is important.

4. What actually causes a heart attack?
Most heart attacks happen because cholesterol buildup blocks the arteries that feed your heart.

5. Can you actually prevent heart disease?
Absolutely. Eat healthy, exercise, keep your blood pressure in check, don't smoke, and get regular screenings. These steps really lower your risk.

6. What are palpitations?
That's when you feel your heart beating fast, hard, or irregularly—sometimes it feels like fluttering or pounding. It's worth getting checked out.

7. When is chest pain an emergency?

If chest pain is severe, lasts more than a few minutes, moves to your arm or jaw, or comes with sweating or trouble breathing, get medical help right away.

Neurology Care

Neurology Care

Overview

At Avantis Hospital's Neurology Department, we help people dealing with problems that affect the brain, spinal cord, and nerves. Neurological issues can mess with how you move, feel, remember things, talk, or keep your balance. Catching these problems early really makes a difference and can stop bigger complications down the road.

If you're having headaches, dizziness, weakness, numbness, tremors, or seizures, we start with a thorough check-up and the right tests. Our main goal? Get the diagnosis right, help you manage your condition for the long haul, and keep you as independent as possible.

With the right treatment and regular check-ins, lots of neurological conditions stay under control, and you get to enjoy a better quality of life.

Key Services & Specialties

- Treatment for headaches and migraines
- The diagnosis and treatment of stroke
- Management of seizures and epilepsy
- Treatments for Parkinson's disease and tremors
- Neuropathy and alleviation of nerve pain
- Treatment for balance issues and vertigo
- Support for memory and cognitive disorders
- Expertise in facial nerve palsy
- Assessment of muscle weakness
- Assistance with tingling and numbness

Advanced Neuro Care

Stroke Care & Prevention
By identifying strokes early and taking immediate action, we can lessen their impact and prevent them from happening again.

Epilepsy & Seizure Management
We identify the underlying cause, develop a treatment plan, and assist you in managing seizures so you can resume your regular activities.

Movement Disorder Treatment
People with Parkinson's, tremors, and coordination problems are under our care, and we constantly monitor and modify treatment as necessary.

Nerve & Neuromuscular Disorders

We check for things like neuropathy, nerve compression, and muscle problems that affect your strength and sensation.

When Should You See a Neurologist?

Don’t wait if you notice:

- Frequent or severe headaches
- Abrupt weakness in your leg or arm
- Tingling or numbness
- Dizziness or issues with balance
- Shaking or tremors
- Confusion or memory loss
- Blackouts or seizures
- Difficulty communicating or comprehending others
- Getting checked early helps avoid long-term problems.

Book My Appointment

If you need a neurological check or ongoing care, you can set up an appointment at Avantis Hospital. Seeing a specialist early helps us figure out what’s going on and start the right treatment fast.

FAQs

1. What's the distinction between a neurologist and a neurosurgeon?
A neurologist uses medicine and non-surgical therapy to address neurological problems, whereas a neurosurgeon performs brain and spine surgeries when needed.

2. What causes migraine headaches?
Stress, a lack of sleep, dehydration, certain meals, hormonal fluctuations, strong lights, and excessive computer time are all common factors.

3. Can stress produce neurological symptoms?
Yes. Stress and worry can produce headaches, dizziness, tingling feelings, sleep disturbances, and difficulty concentrating, but a complete diagnosis is required to rule out medical reasons.

4. What causes the numbness in my hands and feet at night?
This could be caused by diabetes-related neuropathy, vitamin deficiency (especially B12), nerve compression, or postural strain on the nerves during sleep.

5. When should a seizure be treated as an emergency?
If a seizure lasts more than 5 minutes, recurs without recovery, happens for the first time, or is accompanied by injury or trouble breathing, seek medical attention immediately.

6. What are the early indicators of Parkinson's disease?
Mild tremors, slower motions, stiffness, tiny handwriting, decreased facial expression, and balance issues are all possible early indications.

7. Is nerve damage reversible?
Some nerve injuries improve with therapy and time, particularly when identified early. Long-term nerve injury may necessitate continuing treatment.

Nephrology & Kidney Care

Nephrology & Kidney Care

Overview

At Avantis Hospital's nephrology department, we focus on helping people with kidney problems and issues with their body's electrolytes. Most folks don't realize how much the kidneys actually do, they handle waste, keep blood pressure in check, and balance fluids throughout the body. When something starts to go wrong, catching it early and treating it right away really makes a difference.

If you notice swelling, your bathroom habits change, your blood pressure climbs, or you have diabetes-related kidney trouble or odd test results, we take a close look. We don't just check things once and send you on your way. We stick with you, manage your treatment over the long haul, and keep an eye on how things are going. Our goal is simple: help your kidneys work their best, slow down any disease, and help you feel better day to day.

Key Services & Specialties

- Care for chronic kidney disease (CKD)
- Treatment for acute kidney problems that occur suddenly
- Handling diabetes-related kidney problems
- Handling hypertension that impacts the kidneys
- Examining kidney infections (such as UTIs)
- Determining the reason behind protein in the urine or other irregular urine tests
- Tips for avoiding kidney stones
- Taking care of electrolyte imbalances
- Handling edema and fluid retention
- Prior to dialysis, counseling and observation are required.

Advanced Kidney Care

Chronic Kidney Disease
We keep track of your kidney health and use treatments that help slow down the disease and avoid complications.

Diabetes & Blood Pressure
Managing diabetes and high blood pressure is key to protecting your kidneys and stopping further damage.

Sudden Kidney Issues
Sometimes kidney function drops quickly because of infections, dehydration, medicines, or other health problems. We identify the cause and treat it fast.

Long-Term Support & Prevention

Regular check-ups, diet advice, and lifestyle tips help keep your kidneys healthy and reduce the chances you'll need dialysis later on.

When Should You See a Kidney Specialist?

A nephrologist should be consulted if you have:

- Swelling in your legs, feet, or face
- Foamy or bloody urine
- Having frequent nighttime urination needs
- Urinating less than usual
- High blood pressure that refuses to go away
- Unmanaged diabetes
- Results of abnormal creatinine or kidney tests
- Recurrent infections of the urinary tract

Getting help early helps protect your kidneys from getting worse.

Book My Appointment

If you need a kidney checkup or want to talk about treatment options, you can book a visit at Avantis Hospital.

Dr. Naveen
Consultant Nephrologist

Seeing a kidney specialist on time really helps you keep your kidney function, avoid complications, and stop things from getting to the point where you need advanced treatments.

FAQs

1. What are early signs of kidney disease?
You might notice swelling, feeling tired, losing your appetite, peeing more often at night, or weird results in your blood or urine tests.

2. Can kidney disease be cured?
Some kidney issues go away if you catch them early, but chronic kidney disease usually needs to be managed to stop it from getting worse.

3. How does diabetes affect the kidneys?
High blood sugar slowly damages the parts of your kidneys that filter waste, which can lead to diabetic kidney disease.

4. What is creatinine?
Creatinine is something doctors check in your blood to see how your kidneys are working. High levels mean your kidneys aren't working as well as they should.

5. When do you need dialysis?

Dialysis comes into play when your kidneys can't filter out waste anymore and your body needs help to do the job.

6. Can high blood pressure hurt your kidneys?
Definitely. If you don't control your blood pressure for a long time, it's one of the top reasons people get kidney disease.

7. How can I keep my kidneys healthy?
Keep your diabetes and blood pressure under control, drink enough water (but not too much if your doctor says so), avoid taking painkillers you don't need, stay at a healthy weight, and get checked regularly.

8. What is chronic kidney disease (CKD)?
CKD means your kidneys slowly lose their ability to work over time. It often starts because of diabetes or high blood pressure, and you might not notice symptoms early on.

9. Is foamy urine a sign of a kidney problem?
Yes. If your urine is foamy all the time, that can mean there's protein leaking into it — an early sign of kidney trouble that needs a doctor's attention.

10. How much water should I drink to keep my kidneys healthy?
Everyone's needs are a bit different. Most healthy adults do well with steady hydration, but if you have kidney disease, your doctor will let you know exactly how much fluid you should have.

Rheumatology & Autoimmune Care

Rheumatology & Autoimmune Care

Overview

The Rheumatology Department at Avantis Hospital focuses on identifying and managing inflammatory and autoimmune conditions that affect your bones, muscles, joints, and connective tissues. In addition to causing pain, these conditions also cause swelling, stiffness, and persistent fatigue that is difficult to get rid of. If you wish to prevent irreversible joint damage, it is crucial to catch it early.
Our effort is to reduce inflammation, prevent the disease from worsening, and assist you in returning to your normal activities. You have a good chance of maintaining your mobility, independence, and active lifestyle if you receive care early and adhere to it.

Key Services & Specialties

- The treatment of rheumatoid arthritis
- Treatment for osteoarthritis
- The treatment of ankylosing spondylitis
- Psoriatic arthritis
- Uric acid disorders and gout
- SLE, or systemic lupus erythematosus
- Autoimmune diseases of the connective tissue
- Assessment of Vasculitis
- Evaluation of chronic joint pain
- Disorders of the inflammatory muscles

Advanced Rheumatology Care

Management of Autoimmune Diseases
Comprehensive assessment and long-term treatment planning to control immune system inflammation.

Treatment for Inflammatory Arthritis
medication-based treatment to prevent chronic joint injuries and lessen joint swelling and discomfort.

Metabolic Joint Disorders and Gout
The identification and treatment of recurrent gout attacks and joint pain brought on by uric acid.

Long-term observation and lifestyle advice.
Regular check-ups, medication changes, and preventative measures are all suggested to maintain joint function and overall health.

When Should You See a Rheumatologist?

Consult with a rheumatologist if you have:

- Persistent joint soreness lasting more than six weeks
- Morning stiffness lasts more than thirty minutes.
- Swelling of numerous joints
- Unexplained tiredness
- Joint redness or warmth
- Recurrent gout attacks.
- Back stiffness improves with movement.
- Symptoms of autoimmune illnesses include skin rashes and mouth ulcers.

Early management can assist in preventing irreparable joint damage and disability.

Book My Appointment

Avantis Hospital offers visits for thorough rheumatology examination and autoimmune disease care.

Dr. Chirag, Consultant Rheumatologist.

A timely consultation can help manage inflammation, alleviate discomfort, and avoid long-term joint issues.

FAQ

1. Rheumatoid arthritis: what is it?
An autoimmune condition called rheumatoid arthritis causes swelling, pain, and stiffness as the immune system attacks the joint lining.

2. What distinguishes rheumatoid arthritis from arthritis?
Inflammation of the joints is called arthritis. An autoimmune disease that symmetrically affects numerous joints is rheumatoid arthritis.

3. Can autoimmune diseases be cured?
Although the majority of autoimmune diseases cannot be completely cured, they can be successfully managed with the correct medical attention.

4. Why do you wake up with tight joints?
More than half an hour of morning stiffness could indicate inflammatory arthritis instead of normal wear and tear.

5. What triggers attacks of gout?
Gout flare-ups can be brought on by high uric acid levels, dehydration, alcohol, and specific foods. 6. Is rheumatology linked to back pain? Ankylosing spondylitis may be the cause of persistent inflammatory back pain, especially in young adults.

7. How is Lupus diagnosed?

Clinical evaluation, particular blood tests, and symptom assessment are all used to make a diagnosis.

8. Are joint damage reversible?
Early therapy can decrease the development, although severe joint injury may be irreversible.

9. Do rheumatic medications have any undesirable side effects?
Some drugs may have side effects, which is why regular monitoring and follow-up is necessary.

10. When should I get concerned about joint swelling?
If the swelling lasts for weeks, affects many joints, or is accompanied by weariness and fever, a medical check is necessary.

Pulmonology – Respiratory & Lung Care

Pulmonology – Respiratory & Lung Care

Overview

Avantis Hospital's Pulmonology Department diagnoses and treats disorders of the lungs and respiratory system. Breathing difficulties can develop slowly and are sometimes overlooked until they interfere with regular activities. Early examination helps to avoid problems and improve long-term lung function.

We treat both acute and chronic respiratory diseases such as coughing, wheezing, shortness of breath, infections, allergies, and long-term lung illnesses. Our team employs clinical evaluation, lung function tests, and imaging to determine the specific reason and give focused therapy.

Our Pulmonology Services

- Asthma Evaluation and Treatment
- Chronic Obstructive Pulmonary Disease (COPD) Management
- Chronic cough and recurring chest infections.
- Bronchitis and pneumonia therapy
- Allergy-related respiratory diseases
- Tuberculosis (TB) Diagnosis and Management
- Sleep-related respiratory problems.
- Breathlessness and wheezing assessment
- Smoking-related lung disease care
- Assessment of lung function (Pulmonary Function Test, or PFT)
- oxygen treatment and nebulization care
- Preventive respiratory health checks

Advanced Respiratory Care

The Asthma Care Program
We educate you how to use your inhaler, identify your triggers, and ensure you're taking the proper long-term medications. This means fewer assaults and fewer late-night visits to the emergency room.

COPD and Chronic Lung Disease Management
We check in with you on a regular basis, change your medications as appropriate, and teach you breathing techniques to make daily living simpler.

Respiratory Infection Care
Don't put off treating illnesses like pneumonia or bronchitis. Treat them as soon as possible to avoid further complications.

Pulmonary Rehabilitation Support

We give advice on breathing methods, lifestyle changes, and strategies to recover from a respiratory ailment.

When Should You See a Lung Specialist?

If you experience these symptoms, you should see a pulmonologist.

- Persistent cough for longer than 2-3 weeks
- Excessive wheezing or chest tightness
- Shortness of breath when walking or climbing stairs.
- Recurrent chest infections.
- Long-term smoking history.
- Snoring and daytime drowsiness
- Cough out phlegm or blood.
- Asthma symptoms do not improve with normal treatments.

Book My Appointment

Consult our respiratory expert for an assessment and treatment.

Dr. Harshith Rao, Consultant Pulmonologist

Make an appointment at Avantis Hospital for expert evaluation and specialized respiratory care.

FAQ

1. What symptoms indicate a lung disease?
Chest tightness, wheezing, shortness of breath, persistent coughing, and recurrent respiratory infections are common warning signs.

2. Is it possible to cure asthma permanently?
Although asthma cannot usually be cured, it can be effectively controlled with the right inhaler medication and trigger management.
3. Are inhalers safe for long-term use?
Yes. Inhalers are the safest and most effective approach to administer medication straight to the lungs while minimizing adverse effects.

4. When should I be concerned about a persistent cough?
A cough that lasts longer than 2-3 weeks, especially if it is accompanied by phlegm, fever, or weight loss, requires medical attention.

5. What is the Pulmonary Function Test (PFT)?
PFT is a basic breathing test that uses lung capacity and airflow to identify asthma, COPD, and other lung conditions.

6. Can smoking cause irreversible harm to the lungs?

Yes. Long-term smoking can develop permanent lung disorders such as COPD, although quitting might reduce future harm.

7. How can I know if my shortness of breath is severe?
Seek immediate medical attention if your dyspnea happens while you're doing your regular activities, gets worse suddenly, or is accompanied by chest discomfort.

8. What impact do allergies have on breathing?
Yes. Allergies can cause asthma episodes, coughing, sneezing, and wheezing, particularly with the changing seasons.

9. Is it possible to treat pneumonia without being admitted to the hospital?
Although medicine and relaxation at home are typically sufficient to cure mild pneumonia, hospitalization and oxygen assistance may be necessary in cases of severe illness, low oxygen levels, or respiratory problems.

10. What tests do pulmonologists use to identify lung disease?
Depending on the symptoms, the doctor may order a chest X-ray, CT scan, blood tests, sputum examination, or Pulmonary Function Test (PFT) to properly diagnose the illness.

IVF & Fertility Medicine

IVF & Fertility Medicine

Overview

The IVF & Fertility Department at Avantis Hospital provides couples who are having trouble conceiving with thorough testing and state-of-the-art care. A lot of couples may have safe infants if they get medical help in time. Age-related issues, obstructed fallopian tubes, aberrant ovulation, hormone imbalances, poor sperm counts, and other reasons may contribute to infertility. A thorough evaluation is given to each partner.

Fertility Services Offered

- Assessment of infertility in couples
- Treatment for ovulation induction
- IUI, or intrauterine insemination
- IVF, or in vitro fertilization
- Sperm Injection Intracytoplasmically (ICSI)
- Evaluation of male infertility
- Hormonal assessment
- Management of PCOS-related infertility
- Evaluation of recurrent pregnancy loss
- Counseling for fertility preservation

Advanced Reproductive Care

Complete Fertility Evaluation
To pinpoint the precise reason of infertility, comprehensive hormone testing, ultrasound surveillance, and semen analysis are required.

ICSI and IVF Treatment
sophisticated assisted reproductive methods in which the embryo is transferred into the uterus after fertilization takes place in a lab.

Customized Ovulation Tracking
monitoring ovulation cycles closely in order to increase the likelihood of conceiving spontaneously or with help.

Long-Term & Emotional Support
guidance to lower stress and increase success rates at every level of therapy.

When Should You Consult a Fertility Specialist?

- Infertility after a year of regular, unprotected intercourse
- Women over 35 who have been trying for more than six months
- Absent or irregular menstruation

- Thyroid or PCOS conditions that are known
- Miscarriage history
- Male infertility or low sperm count
- obstructed fallopian tubes
- Prior unsuccessful attempts at fertility

Book My Appointment

The likelihood of a successful course of therapy is increased by early consultation.
Visit Avantis Hospital for modern reproductive treatment and a fertility evaluation.

Dr. Vijay Kumar Consultant, Fertility and IVF Expert

Make an appointment for individualized treatment planning and fertility advice.

FAQs
1. What is IVF?
In vitro fertilization, or IVF, is a process in which sperm and eggs are fertilized outside of the body in a lab before the embryo is placed into the uterus.

2. How long does an IVF cycle last?
It typically takes four to six weeks from hormone stimulation to embryo transfer in an IVF cycle.

3. 3. How effective is in vitro fertilization?
Success rates are influenced by age, sperm health, egg quality, and underlying medical conditions. Younger women generally achieve greater success.

4. Is it painful to undergo IVF?
Most stairs don't cause too much discomfort. Egg retrieval is done under anesthesia, and embryo transfer is frequently painless.

5. How many cycles of IVF are required?
Depending on certain circumstances, some couples become pregnant on the first cycle, while others can need several tries.

6. Is fertility impacted by lifestyle?
Indeed. Men's and women's fertility can be impacted by smoking, obesity, stress, sleep deprivation, and hormonal imbalance.

7. Describe ICSI and explain how it differs from IVF.
To increase the likelihood of fertilization, particularly in situations of male infertility, ICSI involves injecting a single sperm directly into an egg.

8. Does infertility usually affect women?
No, infertility is caused by male issues in around 40–50% of instances, which is why both couples need to be assessed.

9. Does IVF therapy have any dangers or adverse effects?
Although IVF is usually safe, in rare instances, some women may have ovarian hyperstimulation, mood swings, or moderate bloating. To reduce dangers, the doctor keeps a watchful eye on every cycle.

10. Can I carry on with my regular activities while undergoing IVF treatment?
The majority of everyday tasks and office work may go on. However, until after embryo transfer, intense physical strain, travel at key phases, and intensive exercise are often avoided.

Dermatology & Skin Care

Dermatology & Skin Care

Overview

At Avantis Hospital, our Dermatology Department takes care of everything related to your skin, hair, and nails. Some problems are simple, like allergies or minor infections. Others stick around for years and really need ongoing care. The sooner you treat them, the better your chances of avoiding scars, hair loss, or stubborn pigmentation that keeps coming back.

We handle both medical and cosmetic skin issues. You'll always get a proper check-up—we don't just cover up the symptoms. Our goal is to find out what's really going on and use safe, proven treatments that actually help your skin heal and boost your confidence.

Dermatology Services

- Acne and acne scars
- Pigmentation and dark spots
- Eczema and dermatitis
- Psoriasis
- Fungal, bacterial, and viral skin infections
- Hair fall and dandruff
- Alopecia (patchy hair loss)
- Nail problems
- Skin allergies
- Warts, corns, and skin tags
- Children's skin conditions

Specialized Skin Care Programs

Acne & Scar Management
We combine medication, topical treatments, and simple skincare advice to cut down on breakouts and scarring.

Scalp Care & Hair Loss
identifying and treating the genetic, dietary, and hormonal factors that contribute to hair loss.

Treatment of Chronic Skin Diseases
managing recurring allergies, psoriasis, and eczema over the long term to reduce irritation and flare-ups.

Treatment for Skin Infections
Correct identification and management of viral, bacterial, and fungal diseases to stop their spread and recurrence.

When Should You See a Dermatologist?

- Creams aren't helping with persistent acne.
- Unexpected thinning or loss of hair
- Redness, rashes, or itching that lasts longer than a week
- Dark or white spots on the skin
- Frequent fungal infections
- Swelling or allergies to the skin
- Unusual growths or changing moles
- Nail thickening or discolouration

Book My Appointment

FAQs

1. When should one be concerned about acne?
If acne is unpleasant, leaves marks, or does not improve after two to three months of treatment, a dermatologist consultation is recommended.

2. What causes the loss of hair?
Common causes include dandruff, anemia, thyroid disorders, stress, hormonal imbalances, and genetic factors.

3. Can illnesses caused by fungi spread?
Yes. Fungal illnesses can be spread by intimate contact, sweating, and sharing clothing and towels.

4. Can pigmentation be permanently cured?
Pigmentation may be significantly reduced and controlled with proper care and sun protection, but maintenance is essential.

5. Is dandruff a harmful condition?
Despite being prevalent, dandruff may lead to infection, inflammation, and hair loss if it is not addressed.

6. Why do skin allergies come back?
Allergies often recur if the trigger—food, sweat, dust, or cosmetics—is not identified and avoided.

7. Are over-the-counter steroid creams safe?
No, long-term use without supervision can exacerbate infections, cause skin thinning, and cause pigmentation problems.

8. Does wearing sunscreen inside still make sense?
Yes. Over time, exposure to sunlight through windows and screens can still result in tanning and pigmentation.

Cosmetology & Aesthetic Care

Cosmetology & Aesthetic Care

Overview

The Cosmetology Department at Avantis Hospital is dedicated to enhancing your look and helping you feel healthier with skin, hair, and a soft appearance. Unlike salon treatments, our medical cosmetology begins with a complete skin examination. Ensuring that you experience a long-lasting betterness with safety and effectiveness.

Hair loss, acne scars, uneven skin tone, and the early indications of aging may all have a negative impact on your self-esteem. We get it. That is why we don't simply treat the surface. Our staff employs cutting-edge technology and tried-and-true dermatological practices to provide you with actual, long-term benefits, leaving you with natural results and better skin and hair.

Cosmetology Services

- Chemical-based peels
- Laser hair removal.
- Acne Scar Treatment
- Treatment for Rejuvenating the Skin
- Interventions to Prevent Aging
- Botox and Filler Consultation
- Restoration of pigmentation
- Techniques for Skin Brightening
- Stretch mark treatment
- Methods for Skin Tightening
- contouring of the face

Advanced Aesthetic Solutions

Laser Treatments
We use lasers with careful precision to get rid of unwanted hair, bring back natural skin color, or smooth out your skin’s surface.

Anti-Age Care
These treatments help your skin feel firmer and younger by reducing wrinkles and lines without the need for surgery.

Scar and Pigmentation Correction
These targeted treatments fade acne scars, lighten dark spots, and even out your skin tone.

PRP Treatment for Hair and Skin
Here, we use your own plasma to naturally boost hair growth and refresh your skin, helping you look and feel renewed.

When Should You Consider Cosmetology Treatment?

- Acne scars or pigmentation influence attractiveness.
- Uneven skin tone, or lackluster complexion
- Early wrinkles or fine lines.
- Excessive face and body hair
- Hair thinning or early balding
- Stretch markings
- Large open pores.
- Skin laxity, or sagging

Set up a time to discover safe, doctor-led cosmetic treatments that fit your needs.

FAQ

1. Are cosmetology procedures safe?
Absolutely. If a trained medical professional does your procedure after checking your skin, you're in good hands.

2. How many laser hair removal sessions do I need?
Most people need 6 to 8 sessions to see the best results. It really depends on your hair type and how fast it grows.

3. Do chemical peels hurt?
You might feel a bit of tingling, but any discomfort is usually mild and doesn't last long.

4. Does PRP work for hair loss?
PRP helps boost hair thickness and slows down hair fall, especially if you catch the thinning early.

5. Will anti-aging treatments look fake?
Not at all. When done right, these treatments give you natural, subtle results—no frozen faces here.

6. Will I need to take time off after a cosmetic procedure?
Some treatments might need a little downtime, but plenty let you get back to your day right away.

7. Can pigmentation come back after treatment?
Yes, if you skip sun protection or don't keep up with skincare, pigmentation can return.

8. When should I start anti-aging treatments?

Starting in your late 20s or early 30s works well for prevention, but it all comes down to your skin’s needs.

Radiology & Diagnostic Imaging

Radiology & Diagnostic Imaging

Overview

At Avantis Hospital's Radiology Department, we deliver fast, accurate imaging so doctors can spot health problems early and jumpstart the right treatment. Sometimes, symptoms just don't tell the whole story—that's where our scans come in. They help zero in on what's really going on.

We work with every specialty you can think of—orthopedics, neurology, cardiology, pediatrics, general medicine, all of them. Our equipment's up-to-date, our technicians know their stuff, and we care about making the whole experience smooth and comfortable. Quick turnaround, clear results, and your comfort always come first.

When doctors get reliable scans early, they can act faster. That means better care and better results for you.

Imaging Services Available

X-rays that are digital
USG (ultrasound) scans
Abdominal ultrasounds
scans of the pelvis
Pregnancy tests
Doppler studies
Imaging of the musculoskeletal system
Imaging of soft tissues
Imaging of the kidneys and urinary tract
Ultrasounds of the neck and thyroid
Children's ultrasounds
Guided diagnostic techniques

Advanced Imaging Support

Ultrasound & Doppler
These help us check internal organs, monitor pregnancies, look at blood flow, and spot soft tissue issues, all without any radiation.

Musculoskeletal Imaging
Great for finding fractures, ligament tears, joint problems, or swelling.

Abdominal & Pelvic Imaging
We use these to examine organs like the liver, gallbladder, kidneys, uterus, and ovaries.

Guided Diagnostic Procedures

Imaging helps us guide needles safely for aspiration or fluid analysis.

When Is a Scan Recommended?

- Ongoing abdominal pain
- Possible fracture or injury
- Swelling or unexplained lumps
- Pregnancy monitoring
- Kidney stones or urinary issues
- Thyroid swelling
- Fever that won't go away
- Problems with blood circulation

Come to Avantis Hospital for quick, reliable scans. Schedule your appointment and get the clear answers you need.

FAQs

Is an ultrasound scan safe?
Absolutely. Ultrasound uses sound waves, not radiation, so it's safe—even for pregnant people.

Do I need to fast before an ultrasound?
For abdominal scans, you'll usually need to fast for 6–8 hours. Don't worry—we'll tell you exactly what to do when you book.

How long does an X-ray take?
It's quick—just a few minutes. You usually get your report soon after.

Are X-rays harmful?
The radiation dose is tiny and safe as long as it's done under medical supervision.

Can I keep taking my usual medicines before a scan?
Most of the time, yes. If you need to stop anything, we'll let you know ahead of time.

What's a Doppler scan?
It's a type of ultrasound that checks blood flow in your arteries and veins—useful for finding blockages or circulation issues.

Do I need a doctor's prescription for imaging?
Usually, having a doctor's referral helps us pick the right scan and gives you the best results.

Can children have ultrasound scans?
Yes, definitely. Ultrasound is painless and radiation-free, so it's especially good for kids.

Psychiatry & Mental Health Care

Psychiatry & Mental Health Care

Overview

At Avantis Hospital's Psychiatry Department, we assist people in dealing with emotional, behavioral, and psychological challenges in their daily lives, relationships, and recovery. Mental health issues are far more common than people realize, and they are completely treatable—early intervention makes a significant difference.

Many people suffer from anxiety, depression, stress, insomnia, or mood swings without seeking help, often because they are concerned about what others will think. That's why we focus on privacy, empathy, and care that's backed by real evidence. When you come in, we actually listen. Every patient gets a thorough assessment and a treatment plan that fits their needs. Sometimes, that means counseling, therapy, medication, or a mix.

Services Offered

- Disorders of anxiety
- Depressive
- Problems with stress and adjustment
- Other sleep disorders, such as insomnia
- Panic attacks
- Obsessive Compulsive Disorder, or OCD
- Bipolar disorder
- Behavioral and emotional challenges
- Teenage mental health
- Substance abuse and addiction
- Issues with focus and memory
- Psychological evaluations

Mental Health Care Programs

Anxiety & Stress Management
We help you figure out what's triggering your anxiety and show you ways to manage worry, restlessness, and those physical symptoms that come with it.

Depression Care
We focus on lifting your mood, boosting motivation, and helping you get back to your daily routine.

Sleep Disorder Treatment
If you're struggling to fall or stay asleep, or your sleep patterns are all over the place, we'll identify the cause and get you on track.

Behavioral & Emotional Support

Whether it’s anger, emotional ups and downs, or trouble coping, we guide both teens and adults to healthier habits and reactions.

When Should You See a Psychiatrist?

- If you feel sad or empty most of the time
- If anxiety or panic attacks won’t let up
- When stress starts messing with your day-to-day
- If you can’t sleep or your sleep is always disturbed
- Sudden changes in mood
- Trouble focusing or remembering things
- Fears or thoughts you can’t shake
- Big changes in how you act or wanting to be alone all the time

Don’t wait too long—seeing someone early makes recovery a lot smoother.

FAQs

1. In what situations should I consult a psychiatrist rather than a counselor?
It's time for a medical evaluation with a psychiatrist if your symptoms are interfering with your everyday life, relationships, employment, or sleep.

2. Are mental health medications addictive?
No, when taken as directed by a physician, the majority of psychiatric drugs do not cause addiction.

3. Is it possible to treat depression completely?
Of course. Most people recover and resume their regular activities with the correct care.

4. Does mental health have a connection to insomnia?
Indeed, sleep issues are frequently caused by stress, anxiety, and depression.

5. Will my data remain confidential?
At all times. Your entire conversation is kept completely private.

6. What is the duration of treatment?
Your condition will determine how long you need care; some people recover in a matter of weeks.

7. Is it possible for stress to manifest as physical symptoms?
Indeed, headaches, palpitations, stomach problems, and fatigue are frequently brought on by stress.

8. Will I always need to take medication?
Not usually. Under medical supervision, we taper medications gradually, and many treatments are only temporary.

Physiotherapy & Rehabilitation

Physiotherapy & Rehabilitation

Overview

The physiotherapy department at Avantis Hospital uses organized rehabilitation programs to improve physical function, relieve pain, and restore movement in damaged parts. Physiotherapy is very helpful in the recovery from neurological conditions, chronic musculoskeletal conditions, injuries, and surgeries.

Focused physical therapy can greatly improve the condition of many patients with stiffness, restricted mobility, or chronic pain. Patients who receive early rehabilitation avoid issues, become less dependent on painkillers, and return to their regular activities sooner.

Physiotherapy Services

- Rehabilitation following surgery
- Care for sports injuries
- Relief from neck and back pain
- Joint pain and arthritis support
- Recovery from a stroke
- Pediatric physio for kids
- Senior rehabilitation
- Treatment for frozen shoulders
- Fracture rehab
- Adjusting posture

Specialized Rehabilitation Programs

Rehabilitation in Orthopedics
We assist you in recovering from ligament injuries, joint replacements, fractures, and chronic joint pain.

Neurological Rehabilitation
We aim to restore your independence through individualized treatment for stroke, nerve damage, or coordination issues.

Recovery from Sports Injuries
In order for you to return to the game safely, we concentrate on increasing your strength and mobility.

Pain Control Treatment
To relieve persistent back, neck, and joint pain, we employ non-invasive methods and focused exercises.

When Should You Consult a Physiotherapist?

- You have persistent neck or back pain.
- You are moving more slowly due to stiff joints.
- After orthopedic surgery, you're recuperating.
- You've suffered a nerve injury or stroke.
- Sports injuries keep coming back
- Balance or walking feels strange.
- Weakness of your muscles is preventing you from
- You have a fracture and are recovering.

Early physical therapy speeds up recovery and gets you ready for success in the future.

FAQ

1. Is physiotherapy painful?
You might feel a bit sore during some exercises, but we design treatment to help you get stronger and move better—never to hurt you.

2. How many sessions will I need?
It really depends on your condition and how you respond. Some people need just a few visits; others need a longer plan.

3. Can physiotherapy help me avoid surgery?
Yes—in many cases, starting physio early can make your muscles and joints strong enough that surgery isn't needed.

4. When do I start physio after surgery?
Usually, your doctor will recommend starting within a few days after surgery.

5. Will physiotherapy help with stroke recovery?
Absolutely. Neurological rehab can bring back movement, improve coordination, and help you get your independence back.

6. Can physiotherapy really help with chronic back pain?
Definitely. Stronger muscles and better posture go a long way toward lasting relief.

7. Do I need a doctor’s referral?
A referral can help, but you can come see us directly for an assessment.

8. Is physiotherapy right for elderly patients?
Yes. Seniors benefit from physio—it boosts mobility, improves balance, and helps prevent falls.
