Obstetrics & Gynaecology

Obstetrics & Gynaecology Hospital in Nagercoil

Women's health needs the right care, comfort, and support at every stage of life. At Siva Hospital, our Obstetrics and Gynaecology team cares for women by offering

1. routine checkups,
2. pregnancy care,
3. high-risk pregnancy support, and
4. treatment for a wide range of gynaecological conditions.

With experienced doctors, modern facilities, and a patient-first approach, families across the region trust us as the best gynaecology hospital in Nagercoil for safe and dependable maternity and women's healthcare.

1. What is the role of obstetrics and gynaecology?
   Specialists in obstetrics and gynaecology provide personalised care for pregnancy and the unborn child, as well as women's reproductive health.

Pregnancy & Maternity Care in Nagercoil- Safe Care for Every Stage of Motherhood

We service patients with complete and personalized **pregnancy care** for expectant mothers, right from conception to delivery. We perform continuous medical supervision as a reliable **maternity hospital in Nagercoil,** along with persistent medical supervision and support. Our services include:

- **Pregnancy checkup** and routine monitoring
- Pregnancy prenatal care programs
- **Prenatal doctor appointments**
- **Breast care in pregnancy**
- Management of **complications of pregnancy**
- Treatment for **common problems during pregnancy**

We are broadly preferred as a **pregnancy care hospital,** managing both the normal and highly risk pregnancy for women.

Common Gynaecological Conditions We Diagnose and Treat

Our specialists diagnose and treat a wide range of women's health conditions using evidence-based approaches. We are efficient in treating conditions like:

- Menstrual disorders

- Polycystic ovary syndrome (PCOS)
- Endometriosis
- Pelvic inflammatory disease (PID)
- Uterine fibroids
- Ovarian cysts
- Infertility
- Sexually transmitted infections (STIs)
- Urinary incontinence
- Pelvic organ prolapse
- Cervical dysplasia
- Disorders in the breast
- Menopause symptoms
- Gynaecological cancers

Menstrual & Hormonal Health Care

We provide qualified care for **disorders of the menstrual cycle**, guaranteeing precise diagnosis and sustained relief.

We provide the following care:

- Understanding the different **types of menstrual disorders**
- Therapy for heavy, painful, or irregular periods
- **Premenstrual SyndromeTreatments**
- Medical management and hormonal assessment

Early intervention can prevent reproductive health problems in the future.

Safe & Advanced Gynaecological Surgeries with Expert Women's Care

Our advanced **endogynaecology and minimally invasive surgeries** for a variety of gynaecological problems. Based upon the clinical assessment raised by physicians, the following suggestions are:

- ### Laparoscopic hysterectomy

  It is a minimally invasive uterus removal surgery done with a small keyhole incision. Our specialists treat it for fibroids, heavy bleeding, and chronic pelvic pain. This helps women recover faster, which provides less pain and shorter hospital stays.

- ### Laparoscopic myomectomy

  Laparoscopic myomectomy is a fibroid removal surgery removing utreine fibroids for the benefit of the uterus and fertility. Recommended for heavy periods, abdominal pain, and fertility concerns. This leaves little to no scarring and heals quickly.

- ### Laparoscopic radical hysterectomy

  This is a minimally invasive cancer surgery for early-stage cervical or uterine cancers. The affected tissues around the uterus are removed with our doctor's precision. Our patients experience reduced pain and recover faster than with open surgery.

- ### Laparoscopic cystectomy for ovarian cysts

  It is an ovarian cyst removal surgery that treats painful and prolonged cysts benefitting the ovary. This will give relief from pelvic pain and help to maintain hormonal balance.

- ### Laparoscopic saplingectomy

  This laparoscopic surgery is a fallopian tube removal, which our specialists do for ectopic pregnancy or damaged tubes. It is performed with small incisions(key holes) so that you can recover faster and be more comfortable.

- ### Laparoscopic oophorectomy

  This is an ovary removal surgery, highly recommended for women who have large cysts or ovarian disease. This method reduces postoperative discomfort, and we provide essential follow-ups for maintaining hormonal and reproductive health.0

These minimally invasive techniques guarantee reduced days for hospital stays, less pain, and quicker recovery.

When Should You Consult a Gynaecologist in Nagercoil

Women often ignore small health concerns until they become serious. Regular checkups with an experienced gynaecologist can help detect problems early and keep you healthy at every stage of life. At Siva Hospital, many families choose our team as the best gynaecologists in Nagercoil for timely diagnosis, pregnancy care, and personalised treatment. FAQ

1. Which is the best hospital for gynaecology?
   For having affordable and specialized care from the best gynaecologist in Nagercoil, Siva Hospital provides services such as menstrual disorders, PMS, and other women's health issues.

2. What are the most common gynecologic problems?
   Menstrual problems, PCOS, infections, fibroids, these are common women-related problems which can be well managed with early diagnosis and treatment.

3. What are the signs of uterine fibroids?

The symptoms include heavy bleeding during menstruation, pelvic pain, abdominal swelling, frequent urination and long periods. If it occurs, visiting the gynaecologist is highly recommended.

4. Which hospital is best for pregnancy care?
   Siva Hospital in Nagercoil is the trusted choice for comprehensive pregnancy care, providing prenatal checkups and support for common pregnancy concerns, along with insurance options.

5. What is the distance from Siva Hospital to Kanyakumari town?
   Siva Hospital is situated in Nagercoil, and you can reach it within a short duration of cost of treatment travel from Kanyakumari and nearby towns.

6. Can I shift my pregnancy checkup and delivery to a hospital in Nagercoil during pregnancy?
   Yes, you can transfer your checkups and pursue prenatal care, which is accessible for you, but have your thorough medical records. Consult the doctor before you depart.

7. Can I continue pregnancy checkups at a nearby clinic in Nagercoil?
   Yes, regular prenatal visits are convenient for consulting when the clinic is near the home, especially during the last trimester.

General Surgery

Most Trusted General Surgery Hospital In Nagercoil

Access to expert surgical care close to home can make all the difference in recovery and overall health. At Siva Hospital, we are proud to serve the community as a trusted **general surgery hospital in Nagercoil**, offering a full range of surgical services for both routine and complex conditions.

Our team of skilled general surgeons and medical staff focus on precision, safety, and timely care. From emergency surgical interventions to elective procedures, we provide thorough evaluations and advanced treatment options for abdominal, soft-tissue, and other general surgical needs. Every patient is treated with personalized attention to ensure comfort, confidence, and the best possible outcomes.

Conveniently located in the heart of **Nagercoil**, our hospital combines modern surgical facilities with compassionate care. Whether you are seeking treatment for minor procedures or require specialized surgical expertise, Siva Hospital is committed to delivering professional, reliable, and patient-centered services.

What Does General Surgery Include?

General surgery includes the diagnosis and surgical management of disorders affecting the tissues of the abdomen, digestive tract, thyroid, breast, and skin. Before suggesting either surgery or medication therapy, our surgeons carefully evaluate each patient based on the problem.
Our surgeons also perform less invasive procedures using **laparoscopic surgery** methods to help patients heal faster and return to their normal activities sooner.

Laparoscopic Surgery – Faster Healing & Less Pain

Using very small cuts (a keyhole), laparoscopic surgery is done in a contemporary method. Surgeons can carry out operations with extreme precision thanks to specialized tools and a small camera.
Advantages consist of:

- Less severe scarring
- Reduced bleeding
- Less discomfort following surgery• A shorter hospital stay
- Quicker recuperation
- A decreased chance of infection

Many people choose our Siva hospital as the top laparoscopic treatment facility provided in Nagercoil for safe and efficient surgery because of these benefits.

Complete Care Under One Roof

Hernia Surgery

Our specialists treat hernias with advanced techniques, including inguinal, umbilical, and incisional hernias, to improve long-term comfort and prevent recurrence.

Appendicitis Surgery

Appendicitis is a medical emergency that causes severe abdominal pain. Our doctors use laparoscopic keyhole methods to conduct **emergency appendicitis surgery** for a quicker recovery and fewer complications.

Gallbladder Surgery

Gallstones can cause pain, vomiting, and problems with digestion. Laparoscopic gallbladder removal, or cholecystectomy, is a common and safe procedure that we do for patients.

Thyroid Surgery or Thyroidectomy

For treating goiter, thyroid nodules, and thyroid diseases, a **thyroidectomy** is advised. We clearly explain the certain **risks of thyroidectomy surgery** while taking precautions to prevent complications. Our specialists guide patients for recovery, medications, and **after thyroidectomy treatment**.

Laser Piles Surgery/Fistulotomy

We offer advanced, minimally invasive, painless, and quick-healing laser therapy for haemorrhoids (piles), fistulas, and fissures.

Bariatric (weight loss) Surgery

Bariatric surgery, such as gastric bypass surgery, enables people with severe obesity and associated problems like diabetes or high blood pressure control their weight over time and enhance their general health.

Health Conditions Our General Surgeons Treat

A wide variety of surgical conditions are treated by our **best general surgeon** and **laparoscopy surgeon** with advanced techniques and effective care.

Digestive & Abdominal Conditions

- Appendicitis (removal of the infected appendix)
- Gallstones and cholecystitis

- Pancreatitis
- Peptic ulcers
- GERD (acid reflux)
- Diverticulitis
- Abdominal adhesions
- Biliary tract diseases

Hernia & Colorectal Disorders

- Inguinal, umbilical and incisional hernias
- Haemorrhoids (piles)
- Fistulas and fissures

Thyroid & Breast Disorders

- Goitre and thyroid nodules
- Thyroid swelling
- Fibroadenomas
- Breast infections and benign breast diseases

Other Surgical Conditions

- Skin and soft tissue tumors
- Abdominal trauma
- Gastrointestinal cancers (stomach, colon, oesophagus)

Signs When to Consult a Surgeon

Complications and emergency hospitalisation can be avoided with early consultation. It is best to consult a surgeon if you have any of the following:

- Persistent abdominal pain
- Unexpectedly developing severe stomach pain (possibly appendicitis)
- A lump or swelling in the abdomen or groin
- Sore neck or difficulty swallowing
- Frequent acidity or vomiting
- Rectal haemorrhage or uncomfortable bowel movements
- Unexpected weight loss
- An enlarged breast or discharge

Emergency Surgical Care

Some conditions require immediate medical attention. Emergency surgery is conducted with efficient care at Siva Hospital to treat severe infections, intestinal blockages, abdominal injuries, **breast diseases and their symptoms** and **emergency appendicitis surgery.** Our doctors provide timely diagnosis, treatment, and regular post-procedure monitoring.

Post-Operative Monitoring: Pain control medications and attentive monitoring of patients are provided after surgery with personalized care.
Patient-centred Care: Our specialists diagnose, pre-plan the complete treatment, extend follow-up support, and provide necessary explanations.
All-inclusive services: Our personalized services include right from diagnosis to rehabilitation and regular medical observation.

Schedule Your Consultation with Confidence

Many people avoid their symptoms, assuming it as simple thing, but minor symptoms noted and treated early can save your life. Having persistent stomach-related problems, thyroid discomfort, hernia symptoms, or abdominal pain, it is highly recommended to consult a doctor. For all of your medical procedures, our specialists at Siva Hospital offer a positive and supportive space. For getting a proper and reliable care at our trustworthy hospital in Nagercoil, Kanyakumari, make an appointment for your consultation as soon as possible.

FAQ

1. **What surgeries are considered general surgery?**
   General surgery includes appendix, gallbladder, hernia, thyroid, breast, and digestive tract organs. The procedures mostly include appendix surgery, hernia repair, gallbladder removal, piles/fistula treatment, and thyroid surgery.

2. **Is laparoscopic surgery safely done in Kanyakumari district hospitals?**
   Yes, Siva hospital which is the best laparoscopic treatment hospital in Nagercoil, can perform laparoscopic surgery with advanced techniques and personalized care.

3. **What is the best treatment provided for a hernia?**
   The most effective treatment suggested for a hernia is surgical repair. This strengthens the weakened muscle with sutures or mesh placement. Laparoscopic hernia surgery is done for quick recovery and to reduce the discomfort of the surgery.

4. **Does Siva Hospital provide emergency surgical care?**
   Yes, Siva Hospital provides emergency surgical care for conditions like acute appendicitis, intestinal obstruction, severe abdominal pain, and injuries that need immediate surgical attention.

5. **Does the hospital accept insurance for surgery?**
   Even before admission, one can speak with the hospital administration about insurance and possibilities for qualified coverage. For scheduled operations, the staff will advise patients on the necessary paperwork and approval processes.

6. **How much will it cost to remove an appendix ?**
   The patient's condition, necessary tests, procedure type (open or laparoscopic), length of hospital stay, and prescription drugs all affect how much appendix removal surgery costs. Following the pre-operative evaluation and doctor's evaluation, a precise estimate is given.

7. **Is appendix surgery risky?**
   A popular and generally safe treatment is appendix surgery. Complications are uncommon with early treatment. Treatment must be started right away since postponing it might increase danger, particularly if the appendix ruptures.

8. **How long is the recovery after retrosternal thyroidectomy?**
   The majority of patients only require brief hospital stays for observation before being able to resume mild activities in a few weeks. Complete recuperation is contingent upon the patient's health and aftercare.

Gastroenterology

The Leading Gastro Hospital in Nagercoil

Digestion issues can have an impact on daily activities such as eating, sleeping, and overall health. Indigestion, vomiting, irregular bowel movements, persistent acidity, or stomach pain should never be ignored. Siva Hospital diagnoses and treats digestive system issues using advanced testing and skilled medical care.

As a **gastro hospital in Nagercoil, Kanyakumari**, our experts thoroughly evaluate each patient and recommend the best course of action, whether it is medication, surgery, endoscopy treatments, or lifestyle changes. Rather than simply treating the symptoms, we seek to identify the underlying cause.

We strive to provide precise, safe, and comfortable care through the use of advanced diagnostic tools and skilled physicians. Anyone looking for a reputable **stomach specialist hospital in Nagercoil** can find one here.

What Does Gastroenterology Treat?

Gastroenterology specializes in diseases of the esophagus, stomach, intestines, liver, pancreas, and gallbladder. Our experts perform a complete evaluation of health condition and the symptoms before suggesting medication, treatment, or surgery. We provide various treatment for:

- Gastroesophageal reflux disease, or GERD. (stomach acid backs up)
- Acidity and gastroenteritis
- peptic ulcer disease
- Irritable bowel syndrome (IBS)
- Crohn's disease and ulcerative colitis are two examples of inflammatory bowel disease.
- Intestinal bleeding
- Liver diseases (hepatitis, cirrhosis)
- Pancreatitis
- Infections and stones in the gallbladder
- Gluten intolerance
- Diverticular disease
- Colorectal cancer.
- Barrett's oesophageal canal
- Haemorrhoids
- Prolonged indigestion and bloating

Our **abdominal pain specialist** is available to patients with chronic stomach pain for a thorough examination.

Advanced Diagnostic & Endoscopic Procedures

Our **Surgical Gastroenterology** section uses the latest equipment to perform both diagnostic and therapeutic procedures. Our **endoscopy**, **colonoscopy**, and **ERCP** (Endoscopic Retrograde Cholangiopancreatography)techniques help patients for detecting of malignancies, ulcers, infections, obstructions, and gastrointestinal bleeding in the early stage.

Endoscopy
Using a thin, flexible camera, the duodenum, stomach, and food pipe are examined. It helps diagnose acidity, ulcers, gastritis, and bleeding.

Colonoscopy
The large intestine is evaluated during this procedure, which also helps identify polyps, colorectal cancer, and chronic bowel diseases.

Endoscopic Retrograde Cholangiopancreatography (ERCP)
An expert procedure for the diagnosis and management of bile duct stones, pancreatic duct problems, and obstructive jaundice.

To ensure a precise diagnosis before recommending any invasive procedures, our center provides **gastro consultation in Nagercoil,** and people around the **Kanyakumari** district also benefit.

Surgical Gastroenterology & Gallbladder Treatment

Our Surgical Gastroenterology department employs cutting-edge tools to carry out both diagnostic and therapeutic procedures. We use colonoscopy, endoscopy, and ERCP (Endoscopic Retrograde Cholangiopancreatography) to test the pancreas, intestines, stomach, bile ducts, and food pipe. Early detection of cancers, ulcers, infections, blockages, and gastrointestinal bleeding is facilitated by these methods.

Gallbladder disease and gallstones

Minimally invasive methods are more effective in treating gallstones and cholelithiasis. When necessary, our specialists perform laparoscopic gall bladder removal (cholecystectomy) for safe and durable relief. Additionally, depending on their condition, a small number of patients may be evaluated for gallstone laser therapy.

Bariatric Surgery (Weight Loss)

We take the following actions for people who are extremely obese and have related diseases like diabetes or high blood pressure:

- Gastric bypass surgery
- Gastric sleeve surgery

These surgeries support better health and long-term weight control. Based on their medical condition, a number of patients may be advised to have sleeve surgery or a gastric bypass.

Symptoms You Should Not Ignore

Consult our **abdominal pain specialist** if you experience any of the following symptoms:

- Regular heartburn or acidity
- chronic pain in the abdomen
- Bloating or indigestion
- Struggling to swallow
- Bloody or black stools
- Weight loss that goes unreported
- Congestion or prolonged diarrhoea
- Vomiting or feeling ill
- Jaundice, or yellowing of the eyes

Early treatment can prevent serious health consequences. Undergoing a detailed review along with endoscopic and laboratory testing, we deliver effective **acidity treatment** and **indigestion treatment**.

Expert Digestive Health Treatment in Nagercoil

Some of the digestive issues, like nausea, chronic bloating, chest burning, or unbearable stomach discomfort, should be consulted immediately, despite their initial mildness. Frequent self-medication may provide temporary relief, but the underlying cause is often ignored.

By getting treatment at a **stomach specialist hospital,** one can determine whether the symptoms are related to ulcers, infections, acid reflux, or other gastrointestinal disorders. During a **gastro consultation**, doctors could suggest simple tests or dietary changes to prevent problems. They might even begin treatment early.

Why Choose Siva Hospital for Gastro Care?

Diagnoses and treatments for all major and minor digestive issues involving the stomach, intestines, liver, pancreas, and gallbladder are the main focus of our gastroenterology department.

- Qualified surgeons and gastroenterologists
- Improved and new endoscopy and colonoscopy facilities
- Accurate diagnosis using contemporary tools
- Treatment programs that are tailored to each patient
- Less disturbing techniques
- Assistance and direction concerning insurance
- A convenient hospital is found in Nagercoil

Providing patient-centered, safe, and effective digestive care to people of all ages is our goal.

FAQ

1. **Who is the top gastroenterologist in my area?**
   Patients in and around the Kanyakumari district can consult the gastro specialists at Siva Hospital, Nagercoil, for evaluation of stomach pain, acidity, and digestive disorders.

2. **Why is my stomach constantly hurting?**
   Intestinal infections, gallstones, ulcers, and gastritis can all cause chronic stomach discomfort. For diagnosis, endoscopy or colonoscopy may be recommended.

3. **What may be treated by a stomach doctor?**
   Acidity, indigestion, IBS, GERD, gallstones, pancreatitis, liver disease, gastrointestinal haemorrhage, and colorectal disorders are all treated by a gastroenterologist.

4. **Does an endoscopy hurt?**
   Endoscopy is often performed under anaesthesia and is a brief procedure. The majority of people simply have little discomfort and are able to go home that same day.

5. **When is a colonoscopy required?**
   For persistent constipation, diarrhoea, blood in the stool, chronic abdominal discomfort, or colorectal cancer screening, a colonoscopy is recommended.

6. **Is surgery to remove the gallbladder safe?**
   Indeed. Laparoscopic gallbladder surgery is a frequent, safe operation that causes little discomfort and has a quick recovery time.

7. **Does Siva Hospital help with insurance?**
   Indeed. Before being admitted, the hospital staff advises patients on insurance coverage, permissions, and other paperwork.

8. **Is treatment for acidity and gastritis expensive in Siva Hospital, Nagercoil?**
   Treatment for acidity and gastritis is not expensive, as usually many patients get better with medications, diet guidance, and short-term treatment provided by the specialized doctors in Siva Hospital. One in a few health-related concerns, if tests such as endoscopy require additional charges, they are applied.

Tab 4

General Surgery Hospital in Nagercoil- Trusted Choice for Exceptional Care

For both common and complex conditions, Siva Hospital, a respected **general surgery hospital in Nagercoil**, provides both surgical and diagnostic services. Our **best general surgeons** use open surgery, laparoscopic (keyhole), and laser procedures to conduct minor, , emergency, and major surgeries.
In addition to performing procedures, Siva Hospital offers full medical management and, necessary treatments.

Early piles, stomach discomfort from gastritis, thyroid issues, infections, and small abscesses are just a few of the problems that can be addressed with medication, wound care, lifestyle modifications, and monitoring. Only when conservative therapy fails or problems arise is surgery recommended.

We provide surgical services to:

- Hernia: a bulge or enlargement in the groin or abdomen
- Appendicitis – infected appendix causing severe stomach pain
- Gallstones – stones in the gallbladder causing pain and vomiting
- Piles & fistula – painful swelling or discharge near anus (Medicines, dietary fiber treatment, and stool control can all be used to treat arly piles. Treatment with a laser or surgery is only advised for severe cases or chronic complaints)
- Bariatric- weightloss surgery
- Thyroid swelling – lump in the front of the neck
- Soft tissue lumps – cysts or fatty swellings under the skin
- Abscess & infections – pus collection requiring drainage
- Injury & wound repair – cuts, tears, and accident injuries

Minimally Invasive Procedures (Keyhole & Non-cut)

- **Laparoscopic Surgery (Keyhole surgery)** – small-incision surgery for hernia, gallbladder, appendix and gynecological conditions
- **Endoscopy** – camera examination of food pipe, stomach and intestine (diagnosis + minor treatment procedures)

Types of Surgeries We Perform

For a variety of illnesses and injuries, Siva Hospital offers general, laparoscopic (keyhole), and laser surgical treatments for minor, urgent, and major surgeries.

Emergency & Injury Surgeries

- Head injury wound suturing (stitches)
- Deep laceration closure (deep cuts)
- Abscess drainage (pus removal)
- Foreign body removal (glass/metal piece)
- Burn wound care
- Soft tissue injury repair

Abdominal & Digestive Surgeries

These are conducted at our **general surgery hospital** for the stomach and its related issues with an experienced **appendectomy surgeon.**

- Appendicitis surgery – appendix removal
- Gallbladder surgery – gallstone removal
- Intestinal obstruction surgery – blockage relief
- Perforation repair – hole closure in intestine/stomach
- Peptic ulcer surgery – ulcer complication treatment
- Adhesiolysis – scar tissue removal
- Colostomy / Ileostomy – temporary stool passage opening

In very early cases, before confirming the need for surgery, evaluation, scans, pain management, and antibiotics are started right away.

Hernia Surgeries

Hernia surgeries are handled with the **best general surgeon** with advanced techniques, the laparoscopic method, and precise care.

- Inguinal hernia: enlargement of the abdomen
- Umbilical hernia – navel swelling
- Hernia incision: swelling in the area after surgery
- Femoral hernia: swelling in the upper thighs
- Epigastric hernia: bulge in the upper abdomen
- Hiatal hernia – stomach sliding into the chest

(Hernia repair is done using mesh placement to prevent recurrence. Laparoscopic hernia surgery is available.)

Proctology (Piles & Rectal) Procedures

We are here with our **best laparoscopic treatments** using laser technology.

- Laser piles surgery – haemorrhoid removal
- Fistulotomy – fistula tract removal
- Fissure surgery – anal tear treatment
- Perianal abscess drainage – pus near anus

Thyroid & Neck Surgeries

We perform complete thyroid-related surgeries including:

- Thyroidectomy – thyroid gland removal
- Goitre surgery – enlarged thyroid treatment
- Thyroid nodule removal – lump excision
- Lymph node excision – gland biopsy

Our team clearly explains about the **risks of thyroidectomy surgery** and guide on **after thyroidectomy treatment,** medications, and frequent follow ups.

Breast Surgeries

We diagnose and provide services for **breast disease other than cancer** such as:

- Fibroadenoma removal – benign breast lump
- Breast abscess drainage – pus removal
- Biopsy – tissue testing

Vascular Surgery

- Varicose vein surgery – swollen vein treatment
- Laser varicose vein ablation – vein sealing (no big cuts)

Minimally Invasive (Laparoscopic) Surgeries

(Keyhole surgery – small cuts using camera)

- Laparoscopic appendectomy
- Laparoscopic hernia repair
- Laparoscopic gallbladder removal (cholecystectomy)
- Diagnostic laparoscopy – internal organ check

Bariatric (Weight Loss Surgery)

For the management of diabetes, obesity, and blood pressure

- Gastric bypass – stomach size reduction
- Sleeve gastrectomy – portion removal of stomach

Conditions That Require a Consultation for Surgery

The symptoms that could point to a surgical issue that needs to be evaluated by a physician.

- Chronic discomfort in the abdomen

- Anywhere in the body, a bump or swelling
- Hernia enlargement during coughing or standing
- Neck swelling caused by the thyroid
- Frequent vomiting
- Wounds that are not healed for a long time
- Pain from varicose veins
- Sudden, intense stomach ache

Many of these issues are initially assessed by ultrasound scanning, blood tests, physical examinations, and consultations. Before suggesting surgery when it is medically safe, our doctors first attempt antibiotics, medicine, food recommendations, dressing care, and monitoring.

Pre-operative and Non-Surgical Care

Patients go through a thorough clinical assessment prior to surgical recommendations. Our medical facility offers:

- Medical care and monitoring
- Infection prevention and antibiotics
- Pain control• Wound treatment and dressing
- Advice on diet and lifestyle
- Reduced the length of hospitalization following laparoscopic operations
- Early mobility and quicker return to work return
- Some endoscopic operations can be discharged the same day.
- Monitoring of follow-up

This guarantees safe preparation if surgery is required and aids in the recovery of many patients without the need for an operation.

Post-Treatment and Aftercare

After surgery, the healing process continues. To avoid recurrence and problems, we provide patients with guidance on medication, food, activity level, wound care, thyroid hormone pills (after thyroid surgery), and long-term follow-up visits.

Emergency Signs - Visit Hospital Immediately

Siva hospital provides 24/7 **emergency surgical care** for appendix, intestinal problems, trauma injuries, abdominal issues, and infected swellings that need immediate surgery. Some of the signs that need emergency care are:

- Severe abdominal pain
- Continuous vomiting
- Blood in stool

- Deep injury or accident
- Rapidly increasing swelling
- High fever with stomach pain

Surgical Facilities Available

- Major & minor operation theatre
- 24/7 emergency surgery
- Pre-operative investigations
- Anaesthesia care
- Post-operative monitoring
- Pain management

Why Choose Siva Hospital for Surgery in Nagercoil

Patients regard Siva Hospital as the best laparoscopic treatment hospital in Nagercoil, Kanyakumari because:

- Experienced general and laparoscopic surgeons
- Laser and laparoscopic surgeries
- Internal endoscopy unit for minor procedures and digestive evaluation
- Treatment for both small injuries and major operations
- Faster discharge for minor procedures
- Patient-centred care and follow-up
- Insurance assistance available

FAQ

1. What issues are treated by a general surgeon?
Hernias, appendicitis, thyroid swelling, breast lumps, abscesses, piles, fistulas, fissures, varicose veins, and wounds from injuries are all treated by general surgeons.

2. Is surgery for a hernia required?
Indeed. Belts and medications never cure hernias. In the absence of surgery, intestinal obstruction or emergency problems may result.

3. What is keyhole, or laparoscopic, surgery?
a camera and small incisions for a minimally invasive procedure. Faster healing, less discomfort, and smaller scars.

4. How much time does it take to recover from hernia surgery?

The majority of patients return to regular employment in 7–10 days, and they are fully active in 3–4 weeks.

5. When do you need emergency surgery?
Emergency surgery is necessary right away if there is sudden, severe stomach pain, swelling, vomiting, bleeding from an injury, or intestinal obstruction.

6. What is surgery for varicose veins?
It is a surgery used to remove or block swollen veins in the legs that cause skin discoloration, discomfort, and edema. Laser therapy enables speedy recuperation.

7. After surgery, how soon can I walk?
To avoid problems and promote recovery, patients are advised to walk within 6 to 24 hours of the majority of laparoscopic and small procedures.

Tab 6

Gastroenterology Surgery Hospital in Nagercoil

Advanced procedures for conditions affecting the stomach, intestines, liver, pancreas, and gallbladder are offered at Siva Hospital, a specialized **gastro surgery hospital in Nagercoil**. With advanced operating rooms and postoperative monitoring, our surgical gastroenterology unit performs emergency, elective, laparoscopic (keyhole), endoscopic, and bariatric procedures.
Patients go through a thorough clinical evaluation, blood testing, ultrasound, and endoscopic examination before surgery is recommended. Drugs, dietary changes, and lifestyle counseling are first used to treat early-stage disorders like as acidity, gastritis, minor ulcers, and gut infections. Only when symptoms worsen, problems arise, or medicinal treatment is ineffective is surgery recommended.

What we provide

Before deciding on surgery, initial medical stabilization and symptom management

- Endoscopic (camera) operations
- Laparoscopic (small-cut) procedures
- Obesity bariatric surgery
- Intestinal and gallbladder procedures

Medical Care & Supportive Treatment

- Management of initial acidity, gastritis, and ulcers
- Treatment for pre-operative stabilization
- Recovery from surgery and nutrition
- Endoscopic assessment prior to surgery

Our team consists of a qualified gastrosurgeon in Nagercoil. For an accurate diagnosis and course of treatment, patients are looking for a Stomach surgery Hospital or a Gastro surgery Specialist in a nearby location.

What is Surgical Gastroenterology?

Surgical Gastroenterology = surgery for digestive organs.
It treats diseases of:
• Food pipe (esophagus)
• Stomach
• Small and large intestine
• Liver
• Pancreas
• Gallbladder

Before choosing medication or surgery, patients receive a gastro consultation for a better understanding.

Conditions We Treat

The following disorders are first assessed medically,

Initial Medical Management

- Acidity and GERD medication therapy
- Gastritis and ulcer treatment
- Liver inflammation medical care
- Pancreatitis supportive treatment
- Infection control and IV fluids
- Diet and digestive enzyme guidance

but when symptoms worsen or problems arise, many patients eventually need surgeries such as:

- Acid reflux disease (GERD): acid rising from stomach
- Gastritis, or inflammation of the stomach
- Stomach wound, or peptic ulcer
- Irritable bowel syndrome
- Internal bleeding, or intestinal bleeding
- Hepatitis and cirrhosis are liver illnesses.
- Pancreatitis, or swelling of the pancreas
- Gallstones: a gallbladder stone
- Gallstone illness, or cholelithiasis
- Haemorrhoids, or swellings
- Poor digestion, or chronic indigestion
- Bloating, or fullness of gas
- Long-term stomach discomfort is assessed by our abdominal pain expert.

Endoscopy(Camera-Based Treatment)

Endoscopy helps diagnose and also treat many digestive disorders without open surgery.

Upper GI Endoscopy

- Detection of acidity complications
- Diagnosis of gastritis and ulcers
- Identification of bleeding sources

Colonoscopy

- Detection of polyps
- Evaluation of chronic constipation or diarrhea
- Colorectal cancer screening

Therapeutic Endoscopy

- Endoscopic biopsy
- Removal of polyps
- Treatment of bleeding ulcers
- Stricture (narrowing) treatment

ERCP (Bile Duct Endoscopy)

- Removal of bile duct stones
- Treatment of obstructive jaundice
- Pancreatic duct problems

When Is Surgery Necessary for a Digestive Issue?

The symptoms of many digestive disorders are initially modest and are managed with medication. However, surgery is required in the following situations:

- Recurring discomfort from gallstones
- ulcers that don't heal
- Blockage of the intestinal tract
- bleeding in the intestines or stomach
- infection of the appendix
- swelling of a hernia
- Jaundice is induced by the blockage of the bile duct
- Medical therapy failure

Life-threatening consequences, including organ damage, infection, and wound rupture, are avoided with early surgical repair.

Surgical Procedures

When symptoms worsen or complications develop, surgery may be required.

- Laparoscopic (keyhole) procedures
- Gallbladder (gallstone) surgery
- Intestinal procedures
- Bariatric (obesity) surgery
- Surgery for severe GERD (Stomach acid flows back)
- Haemorrhoid procedures
- Hernia repair
- Appendix surgery

Laparoscopic Gastro Surgery

Laparoscopic surgery, often known as keyhole surgery, involves making tiny incisions with a camera.
Carried out for:

- surgery on the appendix
- Removal of the gallbladder
- Blockage of the intestinal tract
- Repairing a hernia

Advantages
• Small scars
• Less pain
• Faster healing
• Short hospital stay
Patients searching Best gastro surgeon in Nagercoil, Kanyakumari often prefer laparoscopic treatment due to quick recovery.

Gallbladder & Gallstone Surgery

Gallstone Treatment

- Pain relief
- Infection control
- Stone blockage treatment

Gallbladder Removal (Cholecystectomy)

- Laparoscopic method
- Fast recovery

Laser Treatment for Gallstones
Without doing major surgeries gallstone can be removed using laser treatments applied based on the patient's health concerns.

- Selected patients
- Non-open method
- Quick recovery

Bariatric (Weight Loss) Surgery

For obesity and related diseases (diabetes, BP).

Gastric Bypass Surgery(stomach rerouting)

- Reduces food absorption
- Major weight reduction

Gastric Sleeve Surgery

- (stomach size reduction)
- Removes part of stomach
- Controls appetite

Benefits:

• Diabetes control
• BP control
• Long-term weight loss

When to Consult Immediately

In their early stages, several intestinal issues can be managed without surgery:

- Control of nutrition
- Drug treatment
- Treatment for acid suppression
- Observation and subsequent action
- Changes in lifestyle

Delays in therapy, however, can lead to issues that need to be corrected surgically.
Consult the specialist immediately when you have these complications, they are:
• Continuous acidity
• Severe abdominal pain
• Vomiting blood
• Black stools
• Difficulty swallowing
• Sudden weight loss
• Jaundice (yellow eyes)
• Persistent indigestion
Early visiting a Gastro Hospital prevents major complications.

FAQ

1. When is surgery required to remove the gallbladder?
When gallstones result in persistent discomfort, vomiting, infection, pancreatitis, or jaundice, a gallbladder removal (cholecystectomy) is necessary. Surgery is the long-term treatment since recurrent episodes typically return.

2. Is gallbladder surgery performed laparoscopically safe?
Indeed. With tiny incisions and a camera, keyhole surgery is performed. The majority of patients walk the same day and return home in a day or two.

3. How much time does it take to recover from appendix surgery?
Recovery from laparoscopic appendix ectomy typically takes five to seven days. Within a week or two, a regular pattern can begin.

4. For whom is bariatric surgery (weight loss) necessary?
If diet and exercise are ineffective for patients with extreme obesity, uncontrolled diabetes, high blood pressure, or sleep apnea, they may need gastric sleeve or gastric bypass surgery.

5. How can I tell whether the pain in my stomach is surgical?
Frequent stomach discomfort accompanied by fever, vomiting, bloating, or difficulty passing motion may be a sign of blockage, perforation, or appendicitis and requires immediate surgical assessment.

6. How long does a patient spend in the hospital following laparoscopic gastro surgery?
The majority of laparoscopic gastrointestinal procedures only need one to three days of hospitalization.

7. Is it possible to cure gallstones without surgery?
Medications only provide short-term symptom relief. Surgery is the only effective therapy since stones typically come back.

8. When is the right time to see a gastrosurgeon?
If scans reveal gallstones, an appendix infection, a blockage, a hernia, or if symptoms persist after taking medication, see a gastrosurgeon.

Obstetrics & Gynaecology Surgery Hospital in Nagercoil

A lot of women's health issues, such as irregular periods, pelvic discomfort, infertility, white discharge, abdominal puffiness, or urine incontinence, typically start off slowly. Not all of these ailments call for surgery. The issue may often be controlled and problems avoided with early identification and appropriate medical treatment.

The primary emphasis of our gynaecologists at Siva Hospital first to focus on evaluation and treatments. Every effort is made to treat infections, provide medications, administer hormone therapy, offer lifestyle guidance, and conduct routine monitoring. Only in cases of persistent discomfort, developing problems, or structural illness, such as fibroids, cysts, or prolapse, is surgery recommended.

In Nagercoil, we offer comprehensive women's healthcare services, including modern minimally invasive surgery, as well as consultation, screening, and therapy.

Our Approach to Women’s Care

• Thorough consultation and assessment of the scan
• Hormonal control and therapy for menstrual disorders
• Treatment methods that preserve fertility
• Medical management and infection therapy
• When necessary, laparoscopy (keyhole) surgery
• Less scarring and a quicker recovery
* Breast imaging and biopsy guidance
In addition to providing skilled hysterectomy and laparoscopic gynaecological care in Nagercoil, our hospital is renowned for its safe women's treatment.

Common Conditions We Treat

We commonly manage:

- Irregular or painful periods
- PCOS / hormonal imbalance
- White discharge and infections
- Early fibroids
- Small ovarian cysts
- Breast pain and small breast lumps
- Infertility evaluation

- Menopause-related problems
- Urinary infections and mild incontinence

Many of these conditions improve with **medication, hormone therapy, diet advice, and regular follow-up**, avoiding major surgery.

When Surgery Becomes Necessary

When Surgery Is Required:
Surgery is advised only in the following cases:

- Heavy bleeding continues despite treatment
- Large fibroids or cysts are detected
- Severe endometriosis
- Organ prolapse
- Ectopic pregnancy
- Suspicion of cancer
- Long-standing infertility due to blockage

Gynaecology Surgical Procedures

Procedures for Gynaecology Operations that can be conducted using advanced techniques and equipment are

1.Uterus surgeries

- The removal of the uterus via hysterectomy
- Laparoscopic hysterectomy: removal of the keyhole
- Myomectomy: excision of fibroid
- Removal of the endometrial lining using ablation (bleeding control)
- Uterine cleansing, or D&C (Dilatation & Curettage)
- Polypectomy: the removal of polyps

Why it is done

- Significant bleeding
- Fibroids
- suspicion of cancer
- Prolonged pelvic pain

2. Fallopian tube and ovarian surgeries

- Removal of ovarian cysts with surgery
- Oophorectomy: removal of the ovaries
- Tubal ligation – permanent contraception
- Tubal recanalization – tube reopening
- Ectopic pregnancy surgery – emergency removal
- Fallopian tube surgery – tube repair

3. Gynecological Laparoscopic Procedures

(Keyhole surgery: tiny camera incisions)
Usually, minimally invasive surgery (laparoscopy) is only recommended when medication, hormone therapy, or observation fail to provide long-term relief.

Some of the surgeries we perform are

- Laparoscopy for infertility- as an internal check
- laparoscopic fibroid removal- Myomectomy
- Laparoscopic hysterectomy- removal of the uterus
- Ovarian cysts Laparoscopy- removal of ovarian cysts
- Adhesiolysis- the elimination of scars
- Surgery for endometriosis- tissue removal

Benefits

- Reduced discomfort
- Tiny scars
- Walking quickly
- Early release
- Quicker recuperation

carried out by a Nagercoil laparoscopic gynecology surgeon skilled in minimally invasive gynecological surgery.

4. Prolapse and Vaginal Surgery

- Vaginal hysterectomy – uterus via vagina
- Uterine prolapse repair – uterus support
- Vaginal wall repair – tissue tightening
- Pelvic floor repair – muscle support
- Rectocele repair – bowel bulge correction
- Cystocele repair – bladder support

(An organ sliding down is called prolapse.)

5. Non-Cancer Breast Procedures

Patients have a clinical breast examination and scan evaluation prior to any breast operation. For the early diagnosis of breast cancer and prompt referral for oncology care when required, biopsy testing is recommended if a worrisome finding is observed.
Includes:

- Benign tumor- Removal of fibroadenoma
- Elimination of pus- Drainage of breast abscess
- Breast biopsy- tissue analysis

6. Urinary & Pelvic Floor Procedures

- Urinary incontinence surgery – leak control
- Sling procedure – urethra support
- Fistula repair – abnormal passage closure

7. Pregnancy-Related Emergency Surgeries

- Cesarean section (C-section) – baby delivery surgery
- Ectopic pregnancy operation – tube pregnancy removal
- Ovarian torsion surgery – twisted ovary correction
- Post-delivery bleeding control – hemorrhage control

8. Gynecology Laser Treatment (Laser = focused light surgery)

- Cervical erosion cautery – surface healing
- Genital wart removal – wart cautery
- Laser cyst treatment – minimal bleeding

FAQ

1. When is surgery for a hysterectomy advised?
When no other treatment works for huge fibroids, uncontrollably excessive bleeding, uterine prolapse, severe endometriosis, or suspected malignancy, a hysterectomy (removal of the uterus) is advised. Before recommending surgery, a Nagercoil hysterectomy surgeon will assess scans and reports.

2.Is it safe to have laparoscopic gynecological surgery?
Yes, uterine, ovarian cyst, and fibroid operations are performed using laparoscopic (keyhole) gynecological surgery, which involves tiny incisions and a camera. When performed by a laparoscopic gynecological surgeon in Nagercoil, it typically results in less discomfort, less scars, and a quicker recovery than open surgery.

3.How long does it take to recuperate from a hysterectomy, or removal of the uterus?
The majority of patients walk in a day.
Typical daily routine: two to three weeks
Total recuperation: 4–6 weeks
Compared to open surgery, laparoscopic hysterectomy patients recover more quickly.

4. Is surgery necessary for ovarian cysts?
Surgery is necessary if the cyst is big, causes excruciating agony, causes the ovary to twist (torsion), does not get smaller, looks odd when scanned.
Laparoscopy is frequently used in this procedure, which is known as ovarian cyst surgery.

5. What kind of uterine fibroids surgery is performed?
Two choices:

- Fibroid removal during a myomectomy (uterus preserved)
- Removal of the uterus (hysterectomy)

The doctor makes a decision depending on the patient's age, symptoms, and intended pregnancy.

6. Is surgery used to treat infertility?
Surgery is necessary for several reasons of infertility, including: obstructed fallopian tubes, Endometriosis, The uterine septum, Ovarian cysts.
To increase the likelihood of conception, doctors may undergo laparoscopy (keyhole surgery) or hysteroscopy (uterus camera).

7. Does insurance cover gynecologic surgery?
Depending on policy approval and paperwork, the majority of significant treatments, including hysterectomy, ovarian cyst surgery, ectopic pregnancy surgery, and C-section, are often covered by insurance.

8. Are laser treatments used in gynecology painful?
Warts, cervical erosion, and minor lesions can all be treated with minimally invasive laser gynecological treatments. Patients often return home the same day, and they seldom cause bleeding.
